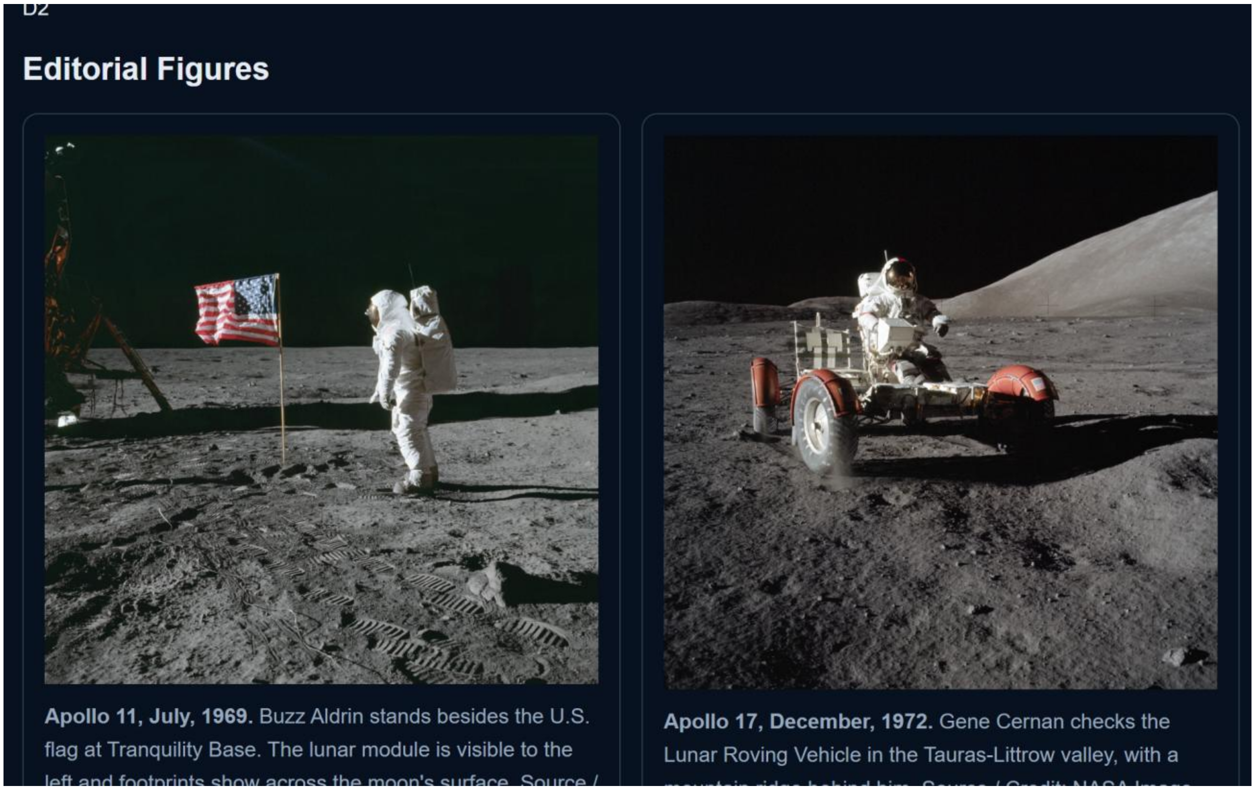
<u>200% zoom – all content remained available and horizontal scrolling for the table section</u>



Keyboard access – every link is focusable in order and the table region is able to take focus. Horizontal scrolling is available with keyboard.

D3

Six landing missions, one widening surface footprint

Apollo lunar surface activity, 1969-1972

Mission	Launch year	Surface duration	EVAs	EVA time (hours)	Surface samples returned (kgs)
Apollo 11	1969	21.6	1	2.53	21.5
Apollo 12	1969	31.5	2	7.75	34.3
Apollo 14	1971	33.5	2	9.38	42.8
Apollo 15	1971	66.9	3	18.58	77.31
Apollo 16	1972	71.0	3	20.23	95.7
Apollo 17	1972	75.0	3	22.07	110.5

Table source: NASA Planetary Data System summaries for Apollo 12, 14, 15, 16 and 17; NASA Apollo 11 mission/history sources for Apollo 11 surface time and EVA duration. Sample mass for Apollo 11 is from NASA Science (about 21.5 kg). Rounded display values are calculated from source hour/minute figures; no source observation is changed.

Source to page spot check

1) Apollo 11 surface duration: Page shows: 21.6h | NASA Source: 21.6h https://www.nasa.gov/history/apollo-11-mission-overview/ and https://www.nasa.gov/history/alsj-and-afj/
2) Apollo 11 sample mass: Page shows 21.5kg | NASA Source: 21.5 kg https://www.nasa.gov/wp-content/uploads/2019/04/02_allton_corrected_apollo.pdf
3) Apollo 16 sample mass: Page shows: 95.71 | NASA source: 95.71kg https://pds.nasa.gov/data/pds3/backup/202010-geo/ap16_lsrp_smd/zzold/mission.cat

Code Defense:

1) Reset Strategy:
    a. Box-sizing: border-box on all elements and pseudo-elements, so padding and borders never expand declared widths.
    b. Margin: 0 on body to remove the default page gutter under the full bleed header.

2) Token Hierarchy
    a. Semantic color tokens: --color-text, --color-surface, --color-action, --color-accent, --color-muted, --color-border, --color-link.
    b. Variants: --color-surface-2, --color-action-dark, --color-space
    c. Non-color tokens: --space-3: --radius-card, --measure, --content-max, --focus

3) Scoped structural decision
    a. Wide size column table is wrapped in .table-region with role="region", aria-labelledby, and tabindex="0", combined with overflow-x:auto, overscroll-behavior-inline: contain, and table {min-width: 58rem }.
    b. At 200% zoom under about 1000px allows the table to become horizontally scrollable, keyboard focusable instead of the squashing the data.
    c. .table-region:focus-visible shows an outline so keyboard users can see

4) Evidence-based revision
    a. Source to page spot check
    b. Observed that table listed surface duration for Apollo 11 at 21.5 h but the sample mass = 21.6kg.
    c. Accidentally swapped the Surface duration and sample mass columns.
    d. Revision: Swapped the surface duration to 21.6 h and sample mass to 21.5kg
    e. Result: After swap the table, svg chart alt, lede, d1 all say the same data from the NASA source.

5) Accessibility decisions:
    a. Semantic sectioning with aria-labelledby pointing each section at its own heading

b. Figure / figcaption for both photos, alt describes the scenes accurately and figcaption shows visible credit.
c. Keyboard reachable table region with a visible outline.
d. SVG chart alt lists all six mission values so the chart still has data if the image is blocked or fails to load.

6) Linked Sources, Asset credits and license notes included in the webpage.
